EDUCATION

Georgia Institute of Technology - Atlanta, GA

B.S. in Computer Science - Systems/Architecture and Information Internetworks

Graduation: Fall 2027

Major GPA: 3.6/4.0

SKILLS

Languages: C, Rust, Java, SQL, Python, Typescript, PHP

Web/Frameworks: Next.js, Symfony, Nginx, Apache

Tools/DevOps: Kubernetes, Helm, Docker, Linux (Arch, RHEL, Debian, Fedora), AWS (EC2, Bedrock)

EXPERIENCE

Technology Summer Analyst

June 2026 – Present

Morgan Stanley

Atlanta, GA

- Migrated and integrated legacy lending services into the firm's credit risk platform, ensuring compatibility across service interfaces and supporting the modernization of backend infrastructure
- Implemented reusable UI artifacts for rendering HTTP, JSON, and path-based request data across internal credit risk systems, improving consistency and maintainability of agentic tooling

Undergraduate Researcher

Aug. 2025 – Present

Georgia Tech VIP: Configurable Computing/Embedded Systems Team

Atlanta, GA

- Developed linux driver for custom 8-pin GPIO module, written in Verilog by the hardware team
- Maximized security by tailoring driver for low-side CPU (prototype has 2 CPUs), protecting the security-critical high-side CPU from malicious button input
- Utilized Xilinx PYNQ-Z1's FPGA for rapid prototyping and testing, creating a comprehensive test suite that covered 100+ use cases

Software Engineering Intern

May 2025 – Aug. 2025

Azalea Health

Atlanta, GA

- Created an AI assistant for Azalea Health's Hospital EHR product, leveraging AWS Bedrock for secure access to high performing foundational models like Claude Sonnet and Opus 4.5
- Wrote 12 production-tested PHP APIs used for context/initialization of the Chart Assistant, reducing prompt-to-response time by 50%
- Developed 20+ unique JSON workflows that exposed numerous legacy ColdFusion and PHP APIs to models, allowing for increased context accumulation beyond initial system prompt
- Adopted an agent-based session architecture by spawning one agent per patient chart, dramatically reducing context window overflow and improving responsiveness by ~3 ms

Software Team Lead

Aug. 2024 – Dec. 2024

Student Software Development Team (CS2340)

Atlanta, GA

- Led team of 5 in the creation of 2 feature-complete web applications, Atlanta Food Finder and an enhanced Spotify Wrapped
- Bootstrapped custom tech stack that leveraged Django as its backend and React as its frontend, resulting in 2x faster development and deployment
- Used Django to manage 10+ tables of user/application data, enforcing proper cascade deletions and foreign key relationships

PROJECTS

The Home Server Project | cribothy.us | *Kubernetes, Debian*

June 2025 – Present

- Manage a multi-node Kubernetes cluster running 20+ containerized services, including media, monitoring, networking, and self-hosted applications
- Implemented GitOps-based infrastructure management with Flux and Kustomize, enabling declarative deployment and automated synchronization from a Git repository
- Configured dynamic persistent storage with an external NFS provisioner, supporting shared RWX volumes for stateful workloads across cluster nodes
- Integrated NVIDIA GPU acceleration into Kubernetes using the NVIDIA Container Toolkit and device plugin, enabling GPU-aware workload scheduling

COURSEWORK

- **Courses:** Design-Operating Systems, Systems and Networking, Computer Organization & Programming, Object Oriented Programming, Data Structures & Algo, Discrete Math, Linear Algebra, Calculus
- **Awards:** Zell Miller Scholarship Recipient, Dean's List 5x
